Configuring your app

To connect services and DevOps toolchains to your app, follow these steps:

1. Use the **Services** card to connect a service to your app, an existing service instance, or create a new service instance. [Learn more.](#)

2. If you want to view the code before your app is deployed, click **Download code** to obtain the .zip file.

3. Click **Deploy your app** in the **Deployment** section. Select the deployment target and configure the deployment. The deployment begins.

4. After the deployment begins, you can view the deployment, modify your app, view your app's URL.

5. If you make any changes to your app, be sure to click **Deploy your app** to update the app.

Building, running, and deploying your app locally

To build and run your app locally:
